

Loomtracer

Threaded project memory for you, your team, and your AI agents.

Context gets left behind

Findings are buried over time.

Decisions separate from reasoning.

It's up to you to connect lost threads.

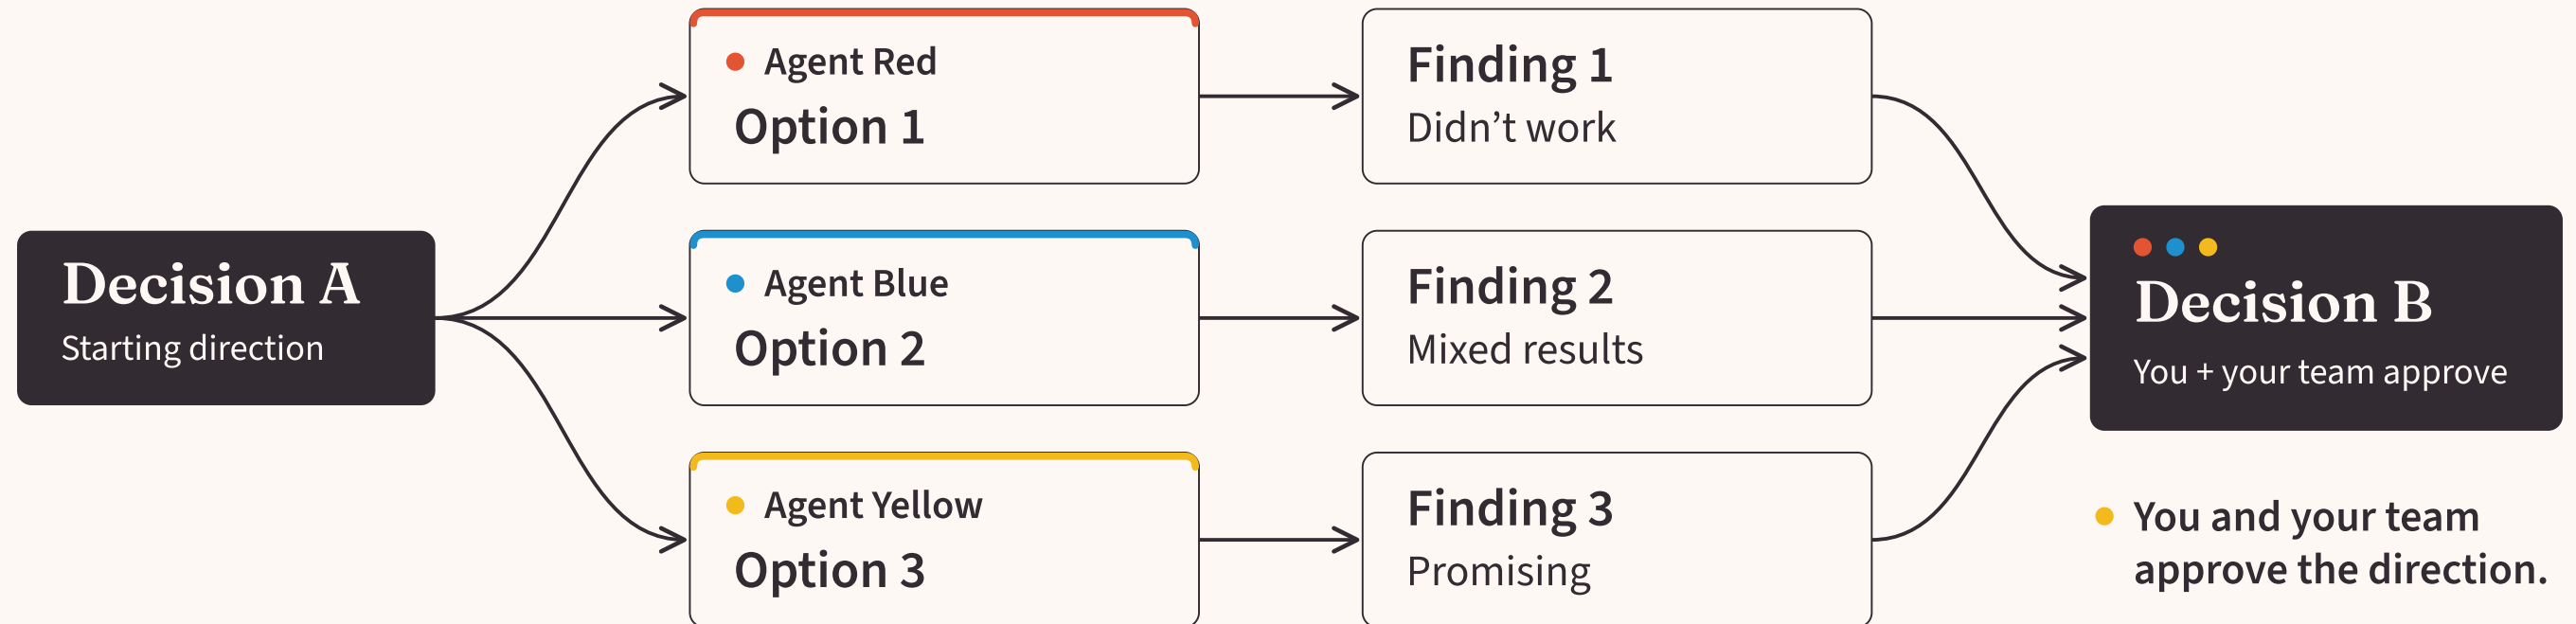

Trace decisions and reasoning from start to finish

01 Start task

02 Divide work

03 Outcomes

04 Ratify decisions

Who decided: a person or an agent

- You can see which choices a person made and which an agent made, so you know what to review.

Claude Code v2.1.281

Opus 5.5 (1M context) · Claude Max

~/code/pantry

▶ We need real storage for pantry. My call: SQLite, one file next to the app. Postgres is overkill for a one-person app, it's a server to run and back up. The JSON file we have now loses writes when two requests land at once. Record the decision in HiveMind.

Called hivemind (ctrl+o to expand)

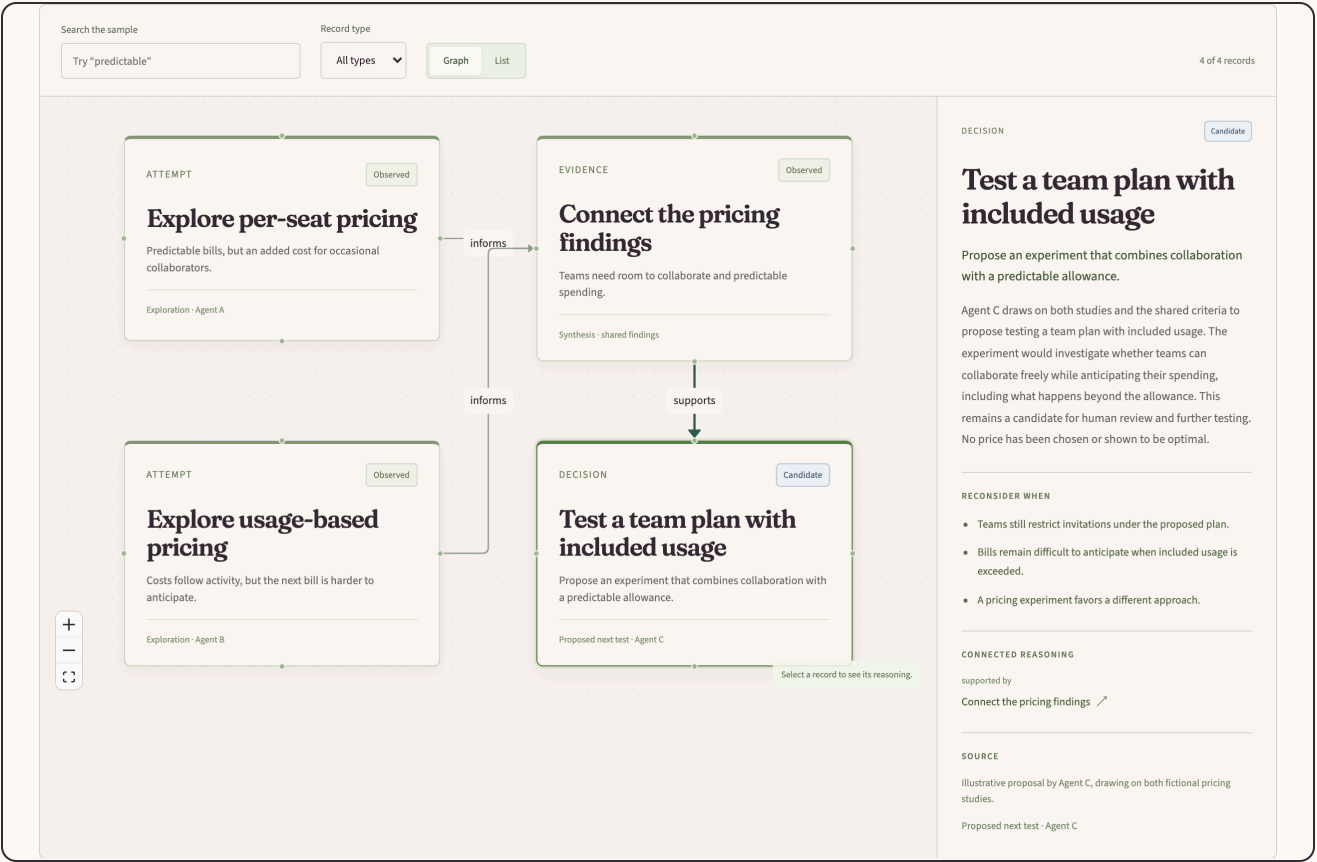

- I saved the decision in HiveMind and marked it accepted. It's decision-44c8ffcb-a02b-4bc1-843f-9904b65c3b15.
 - **Chosen:** SQLite, as a single file next to the app.
 - **Also listed:** Postgres, turned down as overkill because it's a server to run and back up. Keeping the JSON file, turned down because it loses writes when two requests arrive at once.
 - **Decided by:** human:you@example.com, the identity your CLAUDE.md gives. Your own words are attached as the quote.
 - **Topics:** pantry, storage, database.

I haven't changed any code. Do you want me to move the app from the JSON file to SQLite next?
